jnanadeep-s-r jnanadeepsr

Education

M.Sc. Data Science, *Georg-August-Universität Göttingen* 04/2026 – 03/2028 (expected) | Göttingen, Germany

Bachelor of Technology, *Bangalore University* 06/2018 – 05/2022 | Bangalore, India

Experience

Software Engineer, *Tekion* 04/2024 – 03/2026 | Bangalore, India

- Slashed Kafka consumer lag by 70% and tripling event throughput (3×) by re-architecting message processing from single-record listeners to a multi-threaded bulk batch consumption pipeline.
- Architected an event-driven notification service for pre-appointment and post-service customer alerts, driving a 30% increase in customer engagement and reducing no-shows/missed appointments by 25%.
- Spearheaded zero-downtime data migration workflows across multi-tenant Dealer Management Systems (DMS), automating legacy system transitions for enterprise dealerships with zero data loss.
- Integrated inventory reservation systems with the scheduling pipeline, enabling real-time parts allocation during appointment creation and preventing service delays.
- Redesigned the core appointment booking engine, streamlining transactional workflows to achieve a 26% reduction in end-to-end booking time.
- Engineered a configurable, schema-driven OEM integration framework, accelerating third-party automotive partner onboarding and eliminating manual configuration overhead.

Associate Software Engineer, *Tekion* 07/2022 – 03/2024 | Bangalore, India

- Optimized the real-time slot availability lookup algorithm within the scheduling engine, slashing query latency by 27% during peak booking traffic.
- Accelerated consumer-facing booking APIs through response payload optimization and caching strategies, while implementing RBAC/OAuth2 security measures to enforce data compliance.
- Refactored the high-throughput audit log pipeline to a serverless AWS Lambda architecture, enhancing appointment event tracking reliability while reducing infrastructure costs by 15%.

Intern, *Tekion* 01/2022 – 06/2022 | Bangalore, India

- Built a drag-and-drop Custom Form Builder and co-architected its Low-Level Design (LLD), streamlining form creation workflows and enhancing feature scalability

Skills

Programming Languages — Java, C++, JavaScript, Python, SQL, R,
Backend Development — Spring Boot, Spring MVC, REST APIs, Microservices Architecture, Low-Level Design (LLD), Object-Oriented Programming (OOP)
Cloud & Infrastructure — AWS, AWS Lambda, Amazon DynamoDB, Serverless Architecture
Databases & Caching — PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, DynamoDB

Projects

CCLE Pharmacogenomic ML Engine, *Python 3.13, PyTorch Lightning, Scikit-Learn, XGBoost, Pandas*

- Engineered an ML pipeline predicting cellular drug response (EC50) across 1,020+ cell lines, eliminating data leakage (0.04-0.21 artificial R^2 inflation) using 5-fold GroupKFold cross-validation.
- Compressed ~19,215 gene features to K=50 via mRMR selection and benchmarked PyTorch Lightning MLPs against tree models, resolving evaluation bugs via StandardScaler normalization.

Concurrent Cache Engine, *Java 17, Maven, JUnit 5, GPG Published Open-Source Library (io.github.jnanadeep-sr:concurrent-cache-engine on Maven Central)*

- Architected a zero-dependency in-memory cache in Java 17 using fine-grained ReentrantReadWriteLock concurrency control and custom O(1) LRU/LFU/FIFO eviction algorithms.
- Published signed, production-grade artifacts to Maven Central via Sonatype Central Portal, complete with automated Javadoc generation and an extensive JUnit 5 test suite.
