Summary

Backend-focused Software Engineer with nearly 4 years of experience building and maintaining REST APIs, relational and NoSQL databases, and scalable backend systems in Python and Java. Hands-on experience leading system and database migrations, with a strong interest in database architecture and building stable, maintainable backend systems long-term. M.Sc. Data Science student at the University of Göttingen with an independent, structured work style, seeking a Python/Django-focused backend Working Student role.

Experience

Software Engineer I

Tekion

📅 04/2024 – 03/2026 📍 Bangalore, India

- Built an automated customer notification system, boosting engagement by 30% and cutting missed appointments by 25%.
- Led multiple backend and database migrations between dealer management systems, minimizing downtime and ensuring data integrity.
- Redesigned the appointment booking workflow, cutting booking time by 26% and improving customer satisfaction.
- Built a configurable REST API integration flow for onboarding new OEMs, speeding up integration and reducing manual effort.
- Migrated the audit log system to a serverless (Lambda) architecture, cutting infrastructure costs by 15%.

Associate Software Engineer

Tekion

📅 07/2022 – 03/2024 📍 Bangalore, India

- Owned the appointment booking feature on the Scheduling Team; optimized the slot availability algorithm, cutting latency by 27%.
- Improved consumer-facing API response times and added key security measures for stronger data protection and compliance.
- Integrated the parts reservation system into appointment booking via REST APIs, ensuring parts availability for scheduled visits.
- Led the migration of multiple microservices from Java 8 to 11, improving performance by 15–20% and stability by 10–15%.
- Optimized the reporting system's database queries, giving dealers actionable profit-metric insights from customer communications.

Intern

Tekion

📅 01/2022 – 06/2022 📍 Bangalore, India

- Built a drag-and-drop Custom Form Builder for creating personalized forms.
- Contributed to the form builder's low-level design (LLD), improving flexibility and scalability.

Availability

Available to work 20 hours per week.

Skills

Programming Languages

Python R Java (Core) SQL

Frameworks & Libraries

Spring Boot Spring MVC REST APIs Microservices Architecture

Cloud & Infrastructure

AWS AWS Lambda Amazon DynamoDB Serverless Architecture

Databases

MongoDB Redis Elasticsearch DynamoDB MySQL PostgreSQL Relational Databases

ML/Data Libraries

PyTorch NumPy Pandas JUnit Mockito

Practices

SDLC Database Migration Unit Testing Prompt Engineering

Education

M.Sc. Data Science

Georg-August-Universität Göttingen

📅 04/2026 – 03/2028 (expected) 📍 Göttingen, Germany

Bachelor of Technology

Bangalore University

📅 06/2018 – 05/2022 📍 Bangalore, India

Projects

CCLE Drug Response Analysis

🔗 ccle-ml-dr-analysis

- Analyzed the Cancer Cell Line Encyclopedia (CCLE) dataset (~545 drugs × 887 cell lines × 19K+ gene expression features) to identify genes driving drug sensitivity (EC50).
- Trained per-drug regression models that predict drug response directly from gene expression profiles.

Airbnb Price Prediction

🔗 airbnb-price-prediction

- Built a multimodal ML pipeline predicting nightly Airbnb listing prices (Rio de Janeiro, Inside Airbnb data) from tabular, geolocation, and review-sentiment (NLTK VADER) features.
- Ran systematic ablations across categorical encoding, spatial, sentiment, text, and image features; best pipeline model (XGBoost) reached 65.15% R^2 , with AutoGluon AutoML reaching 68.61% R^2 .
